

What is the most important step for proper Penetrant Processing?

There are usually many answers, but the right one is pre-cleaning!

If your parts aren't clean, you will not find defects. The same rule applies to your test panels. If your test panels aren't clean, you will not find indications.

Many times Tam Panels are assumed to be defective when all they really need is a good cleaning. This has certainly been true in panels that have been returned to us.

Save yourself time and aggravation. Invest in a proper Magnaflux® cleaning kit.

If your parts aren't clean, you will not find defects.

To insure proper pre-cleaning for your penetrant line, visit our website at www.magnaflux.com to find the Daraclean/MagnaVu cleaner that works for your application.

ZYGLO® TAM PANEL CLEANING KIT

If your test panels aren't clean, you will not find indications.

The Magnaflux cleaning kit contains:

- A table-top (the size of a toaster) Ultrasonic cleaning unit with heater and timer
- One gallon of MagnaVu alkaline cleaner concentrate
- Complete instructions.

In addition, receive a free Penecert™ Tam Panel Recertification when you purchase this kit from us.
